Summary

A Full-Stack Developer with hands-on experience in MERN full-stack development.
I'm a fast learner and strive for excellence. I'm highly motivated, always curious to solve problems, expand my knowledge, and would be proud to be part of a development team where I will take advantage of all my abilities to the fullest.

Experience

- Project: A web application for Movies & Subscription management
  Description: A **full-stack** web application contains a three-layer architecture design.
  The back-end developed with **Express** and **Node.js** contains two web-services (a node-based REST API). The web-services use different data sources such as databases (**Mongo DB**), JSON files, and online **REST APIs**.
  The front-end developed with **React Hooks** & context API.

- Project: A Cinema Management System Web Site
  Description: A **back-end** website managed by a web-service (a **node**-based REST API), JSON files, and **mongo** databases. The website uses an **MVC** design pattern with **Express** routers architecture, DAL, and BL layers. The data presented to the client via EJS.

- Project: A web application system for managing user's information, assignments, and posts
  Description: A **front-end React.js** application designed to handle multiple server requests using the Utility layer and **REST API** architecture. The data is accessible and managed throughout the app by the class components architecture.
